In order to ensure that Oxygen relief reaches in the fastest time possible, Railways is creating new standards and unprecedented benchmarks in running of Oxygen Express Freight Trains. The average speed of these critical Freight trains is way above 55 in most cases over long distances. Running on high priority Green Corridor, with a highest sense of urgency, operational teams of various zones are working round the clock in most challenging circumstances to ensure that Oxygen reaches in fastest possible time frame. Technical stoppages have been reduced to 1 minute for crew changes over different sections.

Tracks are kept open and high alertness is maintained to ensure that Oxygen Express keeps zipping through.

All this is done in a manner that speed of other Freight Operation doesn't get reduced as well.

Running of new Oxygen is a very dynamic exercise and figures keep getting updated all the time. More loaded Oxygen Expresses are expected to start their journeys later in the night.
